Moog Servo Controllers & Power Supplies

Our K+S Facilities are able to repair and fully load test the T200, T164, and DS2000 series of Moog servo controllers and power supplies. Each controller is carefully evaluated, the necessary repairs and preventative maintenance is then performed. The unit is then fully load tested on the hydraulic load stand to ensure that the controller can source the maximum current. Moog servo controllers with the built in power supply option are tested on the mechanical load stand to fully diagnose & test the internal and external regenerative functions of the drive. All ports on these Moog servo controllers are fully function tested to guarantee a quality repair every time.
