## GE Fanuc Powermate D Servo Test System

This is the GE Fanuc Powermate D CNC system. It is a complete dual axis Fanuc CNC control system with all of the same precision & abilities as any other larger Fanuc CNC system. This Powermate D system has been specifically designed to perform diagnostics and fully run test “any” standard Fanuc AC servo motor with a “serial pulsecoder” as well as test a very wide range of servo drives. Any Fanuc servo drive that requires either a “Type A” or a “Type B” servo interface can be ran on this system. Some of the different series of Fanuc servo drives that this system can test are listed below. In addition, this system will test the Fanuc high voltage “HV” series of servo drives & motors as well.
