Siemens Simoreg DC Drive System

This is the Siemens Simoreg DC drive system. It has been designed to perform full diagnostic testing on the Simoreg drives integral A1-106-100-522 microprocessor regulator control board. Special diagnostic parameters are loaded into this board's memory to ensure that all system functions such as motor control, communications and analog / digital I/O signals operate to OEM specifications. Dynamic run testing on this drive system will ensure a quality repair every time.

ALL UNITS ARE SYSTEM TESTED
