Allen Bradley PLC 5 System

K+S Services can provide full diagnostic and repair service support for this PLC system. As always, each K+S repair is cycle tested and burned in for 2 to 3 days as a standard. Special diagnostic programming enables our technicians to find and eliminate any PLC system faults or errors that can cause costly downtime. K+S can provide repair support for all AB PLC 5 system processors, power supplies, racks, communications & I/O modules as well as programming terminals and special application interface modules. K+S Kokomo facility can also perform upgrades to any old AB T-50 or T-60 programming terminals.
