

Data Logic (Escort Memory Systems) HS870 Series Programmable Controller

K+S Services has the ability for full power dynamic testing for the Data Logic HS870 Series Programmable Controller. The test system is capable of fully exercising all inputs, outputs, communication, and antenna functions.

The system is programmed via ProComm Plus communications software allowing all aspects of operation to be manipulated. In addition, all outputs are under a fully loaded state ensuring no false positives.

The read/write radio-frequency identification functions (RFID) are dynamically tested using the specially ordered antenna and reader/writer equipment.

Be on the lookout as there are many of these cards currently in operation.
