

Fanuc Powermate D Numerical Control System

This is the Fanuc Powermate D numerical control system. It is used in various machining and positioning applications to control up to two independent AC servo axis and an AC spindle drive. K+S Services Kokomo can now provide a complete service repair support for these systems. Diagnostics for either type "A" or "B" servo interfaces can be performed on this system. The system can also test "alpha" or "C" type Fanuc AC servo drives as well. This system is set up to test all peripheral and communications ports on the Powermate too.

A special I/O fixture was designed to run this system in all modes of operation!
