

General Electric “Series Six”

The Series Six programmable controllers are designed for operation in harsh industrial environments. Ladder logic is entered and monitored with the program development terminal. There are three models for the Series Six; Model 6000, Model 600, and Model 60. There are a number of integrated modules that are common to the Series Six. They include: Logic control(remote I/O & transmitter/receiver), Arithmetic control, CMOS memory, and Universal Rack.

The I/O system can be integrated to all models of the Series Six. Types of I/O consist of Standard, High Density, and Smart Modules.

MAIN RACK
