

HEIDENHAIN ENCODER TEST SYSTEM

K+S Services has the capability to repair, calibrate, and fully test any Heidenhain rotary encoder or linear scale gauges. Each encoder or scale is disassembled and visually inspected for mechanical or electrical damage. All worn or defective parts are replaced and the encoder is reassembled. By utilizing the above analysis equipment, K+S Lawton can find even the most minute flaw in the digital encoders or scales glass graduations. This procedure is done to ensure each repair will properly function after installation. These encoders and gauges are commonly found in machine tool, robotics and also in measuring & inspection applications.
