

K+S Certified Repair

- **Factory Trained & Certified Technicians** – Our automation repair technicians undergo continuous training in the field of their expertise. Not only are they intimately familiar with the components they repair, they are also experts in operating the systems used to their work. Often times they are trained directly by the OEM.
- **System Testing** – Every repair must be tested under load to meet or exceed the specifications set by the OEM. K+S utilizes closed loop system testing to simulate how they will be used in a plant environment and to ensure that the parts have been repaired correctly.
- **Available Parts** – K+S only uses new OEM or equivalent parts. Our staff of engineers will design replacement parts in the case of proprietary or obsolete equipment.
- **Documentation** – Everything we do is documented. From drawings, prints and operating manuals of your equipment, right down to detailed repair procedures. We have the information to back what we say we do. Every Certified Repair includes a repair report telling you what we did and how we tested it!

**EVERY Certified Repair is backed by our 12 month
“BUMPER TO BUMPER” in-service warranty.**
