

Mitsubishi M70V System

K+S has added the Mitsubishi M70V System to our family of closed loop CNC testing capabilities. This system gives K+S the ability to test both the 200V and the 400V components from the Mitsubishi MDS-D/DH fiber optic series.

Major Repairable Components Include

Model Series	Unit Type
MDS-D-CV	Power Supply Units
MDS-D-SP	Spindle Drive Units
MDS-D-V1	Servo Drive Units
MDS-D-V2	Servo Drive Units (2 Axis)
MDS-D2-V	Servo Drive Units
MDS-DH-CV	Power Supply Units
MDS-DH-SP	Spindle Drive Units
MDS-DH-V1	Servo Drive Units
MDS-DH-V2	Servo Drive Units (2 Axis)
MDS-DH2-V	Servo Drive Units

K+S Services core belief is to provide best in class quality repairs at a competitive price through full refurbishment and system testing. We achieve this high standard by developing in-house closed loop test capabilities that test each repair to meet or exceed the OEM specifications. After the unit is repaired and fully refurbished, these systems are used to simulate how the unit will operate when placed back into service. Each repaired unit comes with a detailed failure analysis / test report letting you know why the unit failed and any recommended preventative measures to stop it from happening in the future.
