

PMI / Kollmorgen DC Drive

This PMI / Kollmorgen DC drive unit is a single axis servo drive used for controlling up to a 90 VDC, 900W permanent magnet DC servo motor. This drive system is dynamically tested in a closed loop environment for a complete diagnostic evaluation.

Model: 00-88038-011

Type: CX-90-125-15

This PMI / Kollmorgen drive unit is used in CNC and motion control applications & can be found in many industrial facilities.
