

Uson 4000 Series Pressure / Leak Detection System

This is the Uson pressure / vacuum leak detection system. It is used to check for insufficient sealing in products that require a certain specification for pressure or vacuum. K+S Services has the ability to provide full service support on the Uson 4000 series system. The above system is a dual based transducer system that can be reconfigured to test all the systems CPU, power supply, video, I/O, transducer, hard drive and floppy drive modules. The transducer modules can also be tested to proper specification with the type "B" or type "K/H" transducer simulator fixture.
