

Kessler Spindles

K+S is pleased to announce that our partner, Superior Spindle, is the Kessler Authorized repair center for both USA and Mexico. Superior Spindle is factory trained by Kessler in Bad Buchau, Germany. All of the Kessler spindles rebuilds are tested on a Special Kessler test stand under the same stringent conditions they are tested in Germany.

Each Kessler Spindle repair includes a break-in period for the lubrication and a full-speed test run uninterrupted from start to finish for a minimum of 8 hours. During the entire process, the Kessler Test Stand records in real time the temperature data, vibration data, and AMPS/KW. After the spindle test is completed the customer will receive a report with all of the data that was recorded through the entire test as part of our final inspection documentation.
