

Robotic Component Capabilities

Each component from your robot is diagnosed, repaired, and system tested in our robot systems to ensure proper operation in your application.

Our capabilities include support on drives, servo motors, axis boards, operator panels, teach pendants, amplifiers, and power supplies.

We have installed over 50 robotic manipulators and controller systems in order to facilitate complete functional and closed loop testing for a wide range of robotic components.

Common manufacturers include, but not limited to:
Fanuc, Nachi, Kawasaki, Motoman, ABB, Kuka, Comau
