

Teach Pendant Repair

Anyone involved in robot maintenance knows all too well that the most used and abused component in the system is the Teach Pendant. They get dropped, hit, exposed to weld slag and other contaminants, have the cables cut and frayed, and generally worn out. Many repair facilities will replace defective components, clean the pendant up a little, and maybe perform a “bench test”. At K+S Services, we don’t just repair you teach pendant, we completely refurbish it. During our refurbishment process, we perform the following;

- Replacement of front and rear cases as needed
- Replacement of the touch screen
- Replacement of the LCD
- Replacement of the E-stop switch
- Replacement of Dead man switches
- Replacement of hand straps
- Replacement of cables and connectors
- Replacement of the overlay
- Repair / replacement of the control board as required

After refurbishment, the teach pendant is system tested in an actual robot system to verify functionality. All K+S refurbished teach pendants include our 12 month “in service” warranty. Typical turnaround time for a standard priority is 3-7 days with emergency service available. Search our on line inventory for teach pendants available for immediate exchange or purchase.
