

Comau C5G Test System

The Comau C5G controller test system gives K+S the ability to system test all repaired and refurbished components with full diagnostic capabilities.

Major repairable components included in this system are listed below.

- CR10140783 APC820 CPU
- CR10140383 Passive Power Supply
- CR10140483 Aux Power Supply
- CR10141483 Drive
- CR10141583 Drive
- CR1791058* Teach Pendant C5G
- G5G-SDM Safety Chain and Controls

K+S Services core belief is to provide best in class quality repairs at a competitive price through full refurbishment and system testing. We achieve this high standard by developing in-house closed loop test capabilities that test each repair to meet or exceed the OEM specifications. After the unit is repaired and fully refurbished, these systems are used to simulate how the unit will operate when placed back into service. Each repaired unit comes with a detailed failure analysis / test report letting you know why the unit failed and any recommended preventative measures to stop it from happening in the future.
