

Telesis TMC Test System

K+S has the ability to repair and fully test Telesis TMC controllers and marking head components. Telesis pinstamp marking systems are used in a wide array of manufacturing environments. Controllers are compatible with multiple marking heads and do not require a PC. Marking heads may be stationary or portable depending on the application.

Major repairable components included in this system are listed below.

- TMC420 Control Unit
- TMC470 Control Unit
- TMP1700 Marker Head

K+S Services core belief is to provide best in class quality repairs at a competitive price through full refurbishment and system testing. We achieve this high standard by developing in-house closed loop test capabilities that test each repair to meet or exceed the OEM specifications. After the unit is repaired and fully refurbished, these systems are used to simulate how the unit will operate when placed back into service. Each repaired unit comes with a detailed failure analysis / test report letting you know why the unit failed and any recommended preventative measures to stop it from happening in the future.
